SUMMARY

Third-year Computer Science (Data Science and AI) student at the University of Dundee, graduating 2028. I build and ship production software across the full stack — from distributed systems and ML pipelines to SaaS products and client-facing web applications. I founded a GovTech startup (3 venture awards, 30+ schools waitlist), run a freelance development agency since age 15, and currently lead the ML engineering component of an industry project with NCR Atleos. I'm most at home when I own a problem end-to-end: from architecture through to production.

EDUCATION

University of Dundee

Scotland, United Kingdom

BSc (Hons) Computer Science (Data Science and AI) with Industrial Placement

2024 – 2028

- Relevant coursework: Data Structures & Algorithms, Multi-Paradigm Programming, Software Engineering, Artificial Intelligence, Information & Network Security
- **Industrial Project (NCR Atleos):** Technical lead on a **Log Aggregation, Analysis & Intelligent Diagnostics Platform** — multi-source ATM log ingestion including real-time Apache Kafka streams, structured querying layer, and ML-powered anomaly detection (scikit-learn Isolation Forest) deployed against production hardware data for a global ATM engineering team.

PROFESSIONAL EXPERIENCE

Sendix

Dundee, Scotland

Founder & Lead Engineer

Jan 2026 – Present

- Founded a **GovTech B2B SaaS** compliance engine automating statutory legal drafting for UK Multi-Academy Trusts — reducing a 3-hour manual process to 15 minutes (**92% reduction**).
- Engineered a **“Glass Box” RAG architecture** on Azure OpenAI with vector database retrieval and deterministic legislative verification, eliminating AI hallucination risk in legally sensitive outputs.
- Built a **Zero-Retention data pipeline** integrating the Wonde API with automated PII tokenisation, redaction, and full audit logging — designed for public-sector GDPR compliance from the ground up.
- Won **three awards** at the University of Dundee Venture 2026 Competition; commercial waitlist of 3 Academy Trusts covering 30+ schools.

Yarn Development

London, England

Founder & Lead Developer

Mar 2021 – Present

- Delivered **end-to-end production systems** for paying clients across EdTech, hospitality, and professional services — owning requirements, architecture, implementation, CI/CD, and post-launch support.
- Built an EdTech platform (Next.js, Supabase) with AI-generated question banks, RAG feedback sheets, exam builder with synthetic data seeding, and offline-capable print workflows for school environments.
- Managed **client-facing product decisions** throughout — change requests, feature prioritisation, stakeholder communication — developing a product-aware engineering approach from real consequences.

Pollo Game Boat

Boston, MA, USA (Remote)

Co-Founder & Lead Developer

Feb 2021 – Jun 2022

- Built and scaled automated moderation and community tooling serving **250,000+ active users**, migrating backend infrastructure from MySQL to MongoDB under real throughput pressure.
- Developed modular **Node.js/TypeScript APIs** for extensibility and reliability across a globally distributed user base.

PROJECTS

- FluxFile** — Distributed File Processing Platform | *Next.js, TypeScript, BullMQ, Redis, Docker, WebSockets* Feb 2026
- Architected a **distributed async processing system** — containerised worker pool, BullMQ/Redis job queue with backpressure handling, and real-time WebSocket event propagation for audio, video, and document conversion.
 - Built with **AES-256 encryption at rest**, zero-knowledge file storage (Cloudflare R2), SSO auth, Stripe billing, and full observability (Sentry, Axiom) — production-grade from day one.
- Quartz-Lite** — Distributed Task Scheduler | *Java, java.util.concurrent, SQL, JUnit* Oct 2025
- Built a **high-availability job orchestration engine** in Java — custom thread-pool manager using `ExecutorService` and `ThreadPoolExecutor`, configurable pool sizing, graceful shutdown, and thread-safe task submission.
 - Designed **SQL-backed job persistence** for fault tolerance across failures; Strategy, Factory, and Observer patterns for full decoupling; JUnit suite targeting concurrency edge cases and race conditions.
- Autonomous EV Pathfinding Engine** | *Python, NetworkX, GeoPandas, A* Algorithm* Dec 2024
- Engineered a **custom A* search algorithm** over a directed graph of **370,000+ nodes** with multi-variable heuristics balancing geodesic distance, live traffic, and EV energy constraints.
 - Built a **geospatial data pipeline** over OS Open Roads shapefiles (GeoPandas) with a real-time Tkinter path visualisation interface.
- Nicolaou's Maths** — EdTech Platform | *Next.js, Supabase, TypeScript, RAG* Sep 2025
- Full-stack EdTech application for a paying client — AI question bank generation (QGenie), RAG-powered feedback sheets, exam builder with synthetic past-paper seeding, and **react-to-print/docx** for offline school workflows.
- Campus Companion** | *Next.js, Supabase, TypeScript* Mar 2025
- **Winner, DUCS Quackathon 2025** — first place in a competitive 24-hour hackathon.

SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, C, Bash
Frontend: React, Next.js, Vue.js, Tailwind CSS, HTML/CSS
Backend & Databases: Node.js, FastAPI, Express, PostgreSQL, MongoDB, Redis, SQL Server
Distributed Systems: Apache Kafka, BullMQ, async job queues, concurrent programming (`java.util.concurrent`), event-driven architecture
AI & ML: Azure OpenAI, RAG architecture, vector databases, scikit-learn, prompt engineering, LLM output validation
Security & Privacy: PII tokenisation, AES-256 encryption, Zero-Retention pipelines, GDPR-compliant data handling, audit logging
Infrastructure: Docker, GitHub Actions, Microsoft Azure, Cloudflare R2, Vercel, Supabase, Linux
Practices: Agile/Scrum, CI/CD, code review, technical documentation, REST APIs, WebSockets
